TRICENTIS

SAP
S/4 HANA Accelerator

Overview

SAP has delivered another groundbreaking product with SAP S/4 HANA and in-memory computing. However, to derive business value from the technology advancements associated with this release, businesses must build, test and deploy the solution upon migration/adoption—and on every SAP update. Yet, in SAP environments, over 72% of companies rely on manual testing to verify changes in critical business processes. Manual testing is costly (representing over 30% of the typical SAP project budget), time-consuming, and not thorough and accurate enough to guarantee that critical risks will be exposed.

Tricentis Tosca helps enterprises reduce risks while accelerating the pace of business process innovation. With the industry's most advanced SAP business process testing solution, Tricentis helps enterprises effortlessly detect the impact of change to their critical business transactions—across and beyond SAP (including APIs, web UIs, mobile interfaces, custom back-end systems, packaged applications, and more)
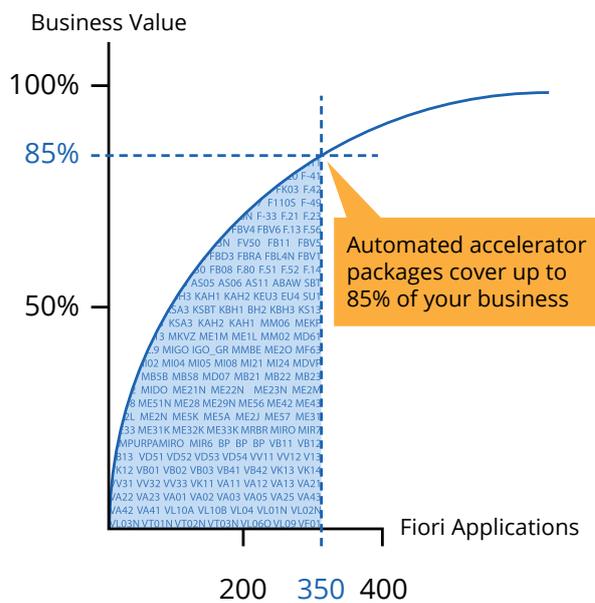

SAP S/4 HANA Accelerator

A new SAP S/4 HANA Accelerator is now available for Tricentis Tosca—extending its industry-leading SAP technology support. This package, which was jointly developed by Tricentis and Spectar, is the first S/4 HANA testing solution developed on S/4HANA Fiori Launchpad.

The SAP S/4 HANA Accelerator provides prebuilt, reusable "automation templates" for 350+ of the most-requested Fiori Applications across Sales, Procurement, Finance and Controlling modules. The package targets Fiori Apps across different SAP modules (such as SAP MM, SD, FI/CO, PM, and PP Modules). The base package includes Fiori Apps in Sales, Procurement, Finance and Controlling modules. The PM and

PP modules are available in separate packs. The package is suitable for SAP S/4 HANA versions 1511 and later.

Using the SAP S/4 HANA Accelerator, users jumpstart their test automation efforts and break through the expensive entrance barriers that have prevented them from achieving their test automation targets. With little to no customization effort, users can add their own business data and adjust individually automated test sequences.

Automated accelerator packages cover up to 85% of your business

About Tricentis SAP Testing

Tricentis Tosca Continuous Testing Platform enables enterprises to automate testing for multiple generations of commonly-used SAP technologies and user interfaces — including the industry's most comprehensive support for SAP Fiori (SAPUI5), SAP Fiori on Mobile (Android & iOS), SAP WebDynpro, CRM-Web Client, SAP Business Client, SAP RFC, SAP API and SAP iDOCs.
