execution agents

Daimler Global IT Solutions Delivery Center Turkey was focused on stepping towards a more modern method of testing. The legacy approach of manual testing with 5 SAP consultants was outdated.

They were able to increase quality and accuracy of the data significantly with Tosca DI.

After one year, billions of columns of data are successfully tested and monitored in 150-300 automated test scenarios. The flexibility in execution timing, via Jenkins, plus the model-based approach of Tricentis, has saved 220 business days of labor.

These stunning results of this very first project of that kind within Mercedes-Benz, created tremendous visibility and the roll-out to more system is upcoming.

Speed changes everything
