

Tricentis NeoLoad Performance testing

SAP and Tricentis have joined forces to bring you a modern, business-friendly approach to SAP application testing. A key part of this solution is **Tricentis NeoLoad**. When new changes are introduced to an SAP system, NeoLoad answers the critical question, “does it scale?” With NeoLoad, your teams can quickly detect and mitigate performance bottlenecks anywhere in your on-prem, cloud, and mobile landscapes before they put your user workloads or customer experiences at risk.

Ensure your apps perform wherever they run

Scale

No matter which applications your business runs on—or where your users run them—NeoLoad ensures your apps perform reliably at scale. NeoLoad is faster and easier to use than legacy performance testing tools and supports SAP and non-SAP applications across on-prem, cloud, and mobile deployments, including:

Speed

- **SAP GUI, Fiori**, and other legacy and modern SAP UIs
- **SAP ECC, NetWeaver, S/4HANA**, and other platforms
- **SAP Ariba, Hybris**, and other cloud-native apps
- **Mobile UI5** apps
- **Citrix, Oracle, Salesforce**, and other enterprise applications
- **Web** testing, including all web protocols and RIA frameworks
- **APIs , components**, and **microservices**

Support

A modern solution for modern enterprises

NeoLoad is designed for the complexities of modern enterprises. It is purpose-built to be flexible and fast, working with complementary testing solutions and toolchains to enable continuous performance testing.

Enterprise ready

NeoLoad supports native testing of major protocols, packaged apps, app-streaming, and integrates across your technology stack.

DevOps ready

NeoLoad easily integrates into automated pipelines through as code testing, open REST API, DevOps tool integrations, and a simple CLI.

Cloud ready

NeoLoad supports all major cloud providers (including AWS, Azure, Google Cloud Platform, and others) and runs realistic, geographically-distributed cloud-only and hybrid tests.

Stack ready

NeoLoad can connect to any other tool or API to share and consume test data and reports or create actions based on SLOs and test results.

A common test definition drives speed and simplicity

SAP application testing solutions from Tricentis integrate with each other to provide greater value. A major benefit of this integration is that functional test cases built and maintained in Tricentis Tosca can be easily reused as performance tests in NeoLoad.

This ensures your performance tests are always up-to-date and always cover real-world user scenarios, saving countless hours of performance test planning and maintenance.

How it works

1. **One click** in Tosca sends functional test cases to NeoLoad.
2. The tests are **automatically converted** to performance tests.

What NeoLoad customers are saying

“By standardizing on NeoLoad as the one tool across all testing phases, we improved the speed of QA and **reduced release cycles by 80%** — and saw **70% fewer** war room incidents.”

“We **migrated 50%** of our testing from Performance Center to NeoLoad **in 3 months** and now script design and maintenance are **75% faster.**”

“With NeoLoad, typical projects now take upwards of **40% less time** for script design and creation. Dell has also **saved 30% maintenance** time and effort compared to their legacy solution.”
