Specialist**

Test Architect

Test Manager

Test Analyst

Course Outcome

Upon completion of Automation Specialist for Databases, you'll be able to carry out database testing using Tricentis Tosca.

This course will teach you how to configure data sources as well as opening and closing database connections required for database testing. You will also learn how to use multiple database connections simultaneously and using test cases to verify data.

Course Outline

Configuring a Data Source Name in ODBC Data Source Administrator

Opening and closing database connections

Using multiple database connections simultaneously

Verifying data in the database

Using the Expert Module
