<b>Tricentis Neoload</b>	<b>5</b>
<b>Tricentis LiveCompare</b>	<b>7</b>
<b>Tricentis Test Automation for ServiceNow</b>	<b>9</b>

# General Information

Currently available features and functionality for different editions of Tricentis qTest, Tricentis NeoLoad, Tricentis LiveCompare and Tricentis Test Automation for Service Now are detailed below. Tricentis may update or modify the features and functionality available for different product editions at any time at its sole discretion.

## TRICENTIS QTEST

Tricentis qTest is a scalable test management solution that helps businesses unify testing and orchestrate quality at speed, with visibility throughout the Software development lifecycle.

qTest Editions	
<b>qTest Pro</b>	Scalable, unified test case management and reporting
<b>qTest Enterprise</b>	Enterprise test management with automation and DevOps workflows.

Features	Descriptions	Pro	Enterprise
<b>Manager</b>	<b>Test case management</b> Track, organize, and report on testing across the business	●	●
<b>Sessions</b>	<b>Exploratory testing</b> Capture exploratory test sessions to create documentation and automated test scripts	●	●
<b>Parameters</b>	<b>Manual testing</b> Manage testing data for test case steps, and define reusable test runs for manual testing	●	●
<b>Custom reporting</b>	<b>Analytics and reporting</b> Analyze application quality and release readiness, and share with the business	●	●
<b>APIs</b>	<b>Third-party integrations</b>	●	●
<b>Scenario</b>	<b>Behavior-driven development (BDD)</b> Streamline and scale behavior-driven development with an intuitive Jira application		●
<b>Launch</b>	<b>Centralized test automation</b> Manage, schedule, and report on automated test execution across environments		●
<b>Pulse</b>	<b>Agile and DevOps workflows</b> Orchestrate event-driven test workflows for Agile development and DevOps		●
<b>Deployment type</b>		Cloud	Cloud / On-prem
<b>License type</b>		Named user	Named or Concurrent user

## TRICENTIS NEOLOAD

Tricentis NeoLoad is used to build continuous performance and load testing for all use cases from APIs and microservices to end-to-end system wide testing of monolithic applications.

NeoLoad Editions	
<b>NeoLoad Essential</b>	For developers and testers who want to ensure that their application will perform at scale
<b>NeoLoad Pro</b>	For enterprise organizations who need to standardize on a performance engineering solution that supports all use cases, development models and business critical applications.
<b>NeoLoad Enterprise</b>	For enterprise organizations who need to standardize on a performance engineering solution that supports all use cases, development models and business critical applications, including SAP.

Features	Descriptions	Essential	Pro	Enterprise
<b>Code-less test design &amp; maintenance</b>	Graphical design tool with drag and drop controls and test recording to simplify test design creation and maintenance	●	●	●
<b>Workspaces</b>	Workspaces allow administrators to group users into teams and assign quotas for virtual users. Teams can organize and collaborate on their performance testing tasks, assets and results	1	Unlimited	Unlimited
<b>SaaS Load Generators</b>	Easy testing from outside the firewall	●	●	●
<b>Test Automation</b>	Design and run tests and automate go/no-go decision based on SLOs within CI pipelines using test as code, CLI, and CI tools integrations		●	●
<b>SSO (SaaS only)</b>	Easier user management		●	●
<b>Resource Reservation</b>	Reserve load testing infrastructure and virtual users to guarantee resources are dedicated for performance testing and avoid testing schedule conflicts		●	●

Features	Descriptions	Essential	Pro	Enterprise
<b>Dynamic Infrastructure</b>	Provision and use load testing infrastructure automatically, on demand in any Kubernetes environment		●	●
<b>Advanced protocol support</b>	Support for testing advanced protocols of enterprise packaged applications like SAP, and Citrix-virtualized applications and desktops		●	●
<b>Support of SAP Applications</b>	Test SAP applications including SAP GUI			●
<b>Deployment</b>		Cloud only	Cloud or On-Premise	Cloud
<b>Maximum concurrent VUs</b>	Max concurrent Virtual Users per test	300 or Custom*	300 or Custom*	300 or Custom*
<b>Concurrent Tests</b>	Allows different teams to test concurrently	1	Custom**	Custom**
<b>Cumulated duration of test runs</b>	Quota of runtime execution for SaaS	100h per month	200h month per concurrent test	200h month per concurrent test
<b>Test Storage</b>	Keep and share your test results up to the limit	250h***	500h*** per concurrent test	500h*** per concurrent test
<b>License Type</b>		Virtual User per annum cost	Virtual User per annum cost	Virtual User per annum cost

\* Additional concurrent VUs may be purchased. Any additional VUs purchased are set forth on the applicable order in VU blocks (1 VU block = 100 Virtual Users).

\*\* Additional team licenses to allow for concurrent testing may be purchased. Any additional team licenses purchased are set forth on the applicable order.

\*\*\* Storage in terms of hours of test vs GB.

## TRICENTIS LIVECOMPARE

Tricentis LiveCompare provides smart impact analysis for SAP updates, using AI to pinpoint exactly what you need to test to ensure a zero-defect release.

LiveCompare Editions	
<b>LiveCompare Essential</b>	For SAP customers wanting to know exactly what to test to reduce the risk of changes to their SAP solutions.
<b>LiveCompare Pro</b>	For SAP customers wanting to automate the discovery, notification, and testing of risks in their SAP changes.
<b>LiveCompare Enterprise</b>	For SAP customers wanting to ensure better quality and defect prevention throughout their entire DevOps lifecycle.

Features	Descriptions	Essential	Pro	Enterprise
<b>Change Impact Analysis</b>	Identifies the SAP objects that are put at risk from a transport, support pack, ChaRM change request, or custom code change.	●	●	●
<b>Tricentis Test Coverage Analysis</b>	Integrates LiveCompare with Tricentis Tosca and Tricentis qTest to identify matching (and missing) test cases for the risks it identifies in an SAP change.	●	●	●
<b>Extended Test Coverage Analysis</b>	Integrates LiveCompare with additional test repositories, including SAP Solution Manager, to identify matching (and missing) test cases in those repositories.		●	●
<b>Continuous Developer Impact Analysis</b>	Automatically detects ABAP code changes in your SAP systems and executes ABAP unit tests, code quality checks, and impact analysis against them, helping developers release higher-quality code, faster.		●	●
<b>Test Audit</b>	Reports the testing status for a release's most-at-risk objects, letting you see at a glance if the changes are safe to deploy.			●

Features	Descriptions	Essential	Pro	Enterprise
<b>Release Assurance</b>	Finds dependent objects that may cause errors when custom transports are imported from QA into a production environment.			●
<b>Code Watch</b>	Analyzes the quality of custom ABAP code changes.			●
<b>Compare Objects</b>	Ensures SAP systems stay synchronized by identifying where key source objects (or their dependencies) are out of synch.			●
<b>Analysis Hours</b>	Number of analysis hours included	100 or Custom*	250 or Custom*	Unlimited
<b>DB Size</b>	Maximum database storage included	500GB	500GB	Custom*
<b>License Type</b>		By Instance	By Instance	By DB size

\* Additional analysis hours may be purchased. Any additional analysis hours purchased are set forth on the applicable order.

\*\* Maximum database size for Enterprise edition set forth on the applicable order.

## TRICENTIS TEST AUTOMATION FOR SERVICENOW

Tricentis Test Automation for ServiceNow enables faster releases of digital workflows, applications and platform updates, built natively on the ServiceNow platform.

Test Automation for ServiceNow Editions	
<b>Test Automation for ServiceNow Essential</b>	For ServiceNow delivery teams who need to keep up with platform upgrade and want to verify all service catalog items and workflows automatically
<b>Test Automation for ServiceNow Pro</b>	For application development teams who want to deliver new workflows more quickly and want to streamline application delivery with continuous test automation.

Features	Descriptions	Essential	Pro
<b>Test Automation</b>	Core testing capabilities purpose built for ServiceNow	●	●
<b>Test Execution Servers</b>	Scalable automated test execution	2 Server max	10 Server max
<b>Recorder</b>	No code test case creation	●	●
<b>Visual Studio Code Plugin</b>	Write and execute test cases in MS Visual Studio Code	●	●
<b>Prebuilt Test Plans for ITSM Portfolio</b>	Full test case coverage of the ITSM Portfolio	●	●
<b>Case Creator</b>	Generates test cases based on ServiceNow configuration To get the core of the test developed for faster script creation		●
<b>DevOps</b>	Continuous automated testing and deployment		●
<b>Developer Workflow</b>	Ensure 100% test case coverage		●
<b>License Type</b>		Named user	Named user
